RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 94 pages. Dimensions: 9.7in. x 7.4in. x 0.2in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1907 edition. Excerpt: . . . line and all the numbers a, ia , of the domain $R(1, i)$ are represented by the totality of points of a plane, one might infer that the totality of points in space is the geometric representation of some algebra in three units. Proceeding on this thought Hamilton attempted to set up a three-unit system $(2, e, e^3)$ which would have this property. In the introduction to his Quaternions he proved that no such system exists when the coefficients a, a, a, a , of the general number $A a, e, a, e, a, e^3$ belong to the domain of reals $R(i)$. His proof consists in showing that any algebra in three units, the coefficients belonging to $R(i)$, contains numbers xx, e, x, e, x^3e^3 and yy, e, y, e, y, e^3 , both different from zero, for which the product $xy = 0$. As Benjamin Peirce points out in his memoir on Linear Associative Algebra, Hamilton's investigation should be made in the field of complex numbers instead of in the field of real numbers. In other words, the coefficients a, a, a, a , of the number $A a, e, a, e, a, e, e$, should be considered as belonging to the domain $R(1, i)$ rather than to the domain $R(r)$. The problem of the present paper consists in carrying out Peirce's thought for one interesting algebra in three units e, e, e^3 . The algebra in question is assumed...
