Not illustrated. 1884 Excerpt: . . . generator; for in these generators the intensity of the magnetic-field is not constant, but directly depends on the rate of rotation of the armature whilst the processes in the interior of the generator are rather more complicated. As regards a dynamo, therefore, we shall still have to answer three important questions. VI. What is the ratio between current and rate of rotation in dynamo-electric generators VII. What relation has the effective magnetism in dynamo-electric generators to the rate of rotation of the armature, and to the increase of current VIII. How many turns of wire must be wound on the field-magnets, and on the armature, in dynamo-electric generators, in order to obtain the maximum efficiency The answers to questions VI and VII are given in an extremely interesting article by Dr. O. Frohlich, in the Monatshefte of the Berlin Academy of Science, published 30th November, 1880....
